Frequently Asked Questions about the Collaborative Care Model

What is the goal of the Collaborative Care Initiative (CCI) Consult Clinic?
- To improve access to care for children and adolescents with mild to moderate mental health problems.

How does the Collaborative Care Model (CCM) work?
- Primary care providers (PCPs) refer patients for an outpatient psychiatric consultation and ≤ 3 additional follow up visits.
- After this extended consultation, the patient returns to the PCP who provides ongoing care.

What types of patients are appropriate for a Collaborative Care consultation?
- The best patients for this model are those with mild to moderate mental health problems (see the Triage sheet).

How can I refer a patient to the Collaborative Care Model?
- Make sure patient is in – network with CCI Consult Clinic.
- Fax the Collaborative Care Consultation Request Form, your most recent clinic note, and the face sheet.

What happens when patients are referred to the Model?
- Our collaborative care child and adolescent psychiatrist (CAP) reviews every consultation request to determine whether case is appropriate for collaborative management.
- If case is appropriate for the Collaborative Care Model, our Intake Coordinator will contact the patient directly to schedule appointment.
- If the patient is not appropriate for Collaborative Care, our Intake coordinator will contact the PCP to suggest appropriate community resources for the patient.

What happens at the end of a Collaborative Care consultation?
- When patient is stable, s/he will be discharged back to the PCP, with specific instructions for ongoing care (i.e. dose titration for psychotropic medication, recommendations for ongoing follow-up with therapy, etc.)
- The PCP has the opportunity for additional outpatient or telephone consultation with the partnering CAP.

How do you know if your patient would benefit from the Child Psychiatry Consultation Model?

1. Does your patient have at least one of the following conditions?
   - Depression of mild-moderate severity with/out anxiety
   - Anxiety that has failed a trial of therapy
   - ADHD that has failed 2 trials of medications
   NO → Consider alternate level of care
   YES

2. Does your patient require emergent care?
   - Psychosis
   - Mania
   - Current suicidal thoughts with intent and/or plan
   YES → Refer patient to the emergency room
   NO

3. Would your patient be better suited with long-term psychiatric care due to a past history of one of the following?
   - Bipolar
   - Psychosis
   - Suicide attempt
   - Psychiatric hospitalization
   - Trauma/abuse
   YES → Refer patient for long-term psychiatric care
   NO

4. Is your patient currently using alcohol and/or drugs multiple times a week?
   YES → Substance abuse treatment
   NO

Your patient is appropriate for collaborative management in the CPCM
