

Snyder Family Cleft and Craniofacial Center

The Snyder Family Cleft and Craniofacial Center, a Partnership for Child Health program in collaboration with WCH, Nemours, UF Jacksonville and community providers, offers children and their families comprehensive patient centered care from an interdisciplinary team of specialists. From prenatal consultation and care in the hospital—through childhood and into early adulthood—our team works together with families and their primary care physicians to diagnose and individualize treatment goals to improve outcomes for each child.

Our commitment is to provide all children and families the care they need to achieve optimal medical, dental, facial and psychological outcomes. In addition to providing premier diagnostic and treatment services to patients, we also provide educational and support programs for families and the community.

The Snyder Family Cleft and Craniofacial Center is the only program in North Florida recognized as an affiliate team of the American Cleft Palate - Craniofacial Association (ACPA).

Meet our friends

Jonathan

Jonathan, known as "JB," is a happy boy who was born with a left complete cleft lip and Veau III palate. He underwent NAM (Nasoalveolar Molding) treatment prior to his cleft lip and palate repair. He is all smiles and excited to be a "big brother"!

Logan

Due to a prenatal diagnosis of a right complete cleft lip, Logan's family was referred for early education and support. Following birth, Logan and his family received presurgical instructions to prepare them for post surgical care and feeding and will continue with the team until his treatment goals are met.

Trinity

Diagnosed with Cleidocranial Dysplasia, Trinity is adjusting to life with this rare disorder. Treatment is slow and tedious, however, she tries to stay in the best spirits. Trinity has a goal to focus more on the great qualities she possesses.

More than 602 patients are in the program.

- Cleft lip and cleft palate
- Rare craniofacial clefts
- Micrognathia
- Craniosynostosis
- Apert syndrome
- Crouzon syndrome
- Pfeiffer syndrome
- Treacher Collins syndrome
- Hemifacial Microsomia
- Parry-Romberg syndrome
- Pierre Robin sequence
- 22q11.2 deletion syndrome
- CHARGE syndrome
- Cleidocranial dysplasia

Our Team

Our team comprises experts from plastic surgery, pediatrics, oral and maxillofacial surgery, craniofacial surgery, neurosurgery, orthodontics, otolaryngology (ENT), speech - language pathology, nursing, dentistry, prosthodontics, social work, audiology, genetics, and psychology.

The Snyder Family Cleft & Craniofacial Center is made possible through the generosity of Ed and Liz Snyder and their family. It is a partnership between the Partnership for Child Health and Wolfson Children's Hospital, in collaboration with Nemours Children's Hospital, the University of Florida College of Medicine-Jacksonville, and community professionals. 5/23
